

Cameron Poole

MSc Data Science student | SQL, Python, data analysis & analytics engineering

London | cameron.edek.poole@gmail.com | linkedin.com/in/cam-edek-poole | github.com/cedekpoole | cedekpoole-website.vercel.app

PROFILE

Philosophy graduate and MSc Data Science student moving into data analyst, BI/insight analyst, analytics engineering and junior data engineering roles in London. I am interested in how messy, ambiguous information can be cleaned, structured, analysed and turned into something useful. Through my MSc, I am developing skills in SQL, Python, statistics, machine learning, data warehousing and BI, while becoming increasingly drawn to the engineering side of data work.

TECHNICAL & PROFESSIONAL SKILLS

Data	SQL, Python, pandas, NumPy, exploratory data analysis, data cleaning, feature engineering, statistical testing, machine learning fundamentals
Databases & modelling	Oracle SQL, PostgreSQL, relational database design, ER diagrams, normalisation, star schemas, fact and dimension tables, data warehousing
BI & visualisation	Tableau, matplotlib, seaborn, Highcharts, dashboard design, data storytelling, visual explanation
Development	Git, GitHub, VS Code, Jupyter, JavaScript, React.js, REST APIs, HTML/CSS, npm
Professional strengths	problem solving, structured thinking, written communication, attention to detail, ownership, teamwork, working with ambiguity
Currently developing	dbt Core, BigQuery, Azure Blob Storage, GitHub Actions, Power BI/DAX through portfolio work

SELECTED PROJECTS

MSc Dissertation - Environment Agency Compliance Risk Analysis

Kingston University | In progress | 2026

- Building a reproducible Python analysis of Environment Agency permit compliance data from 2016-2024 to test whether multi-year compliance history helps identify future serious breaches beyond the current annual band.
- Creating a permit-year panel, resolving pre/post-2022 identifier changes, and engineering temporal features such as previous serious breaches, band volatility, sustained A/B compliance and historical breach counts.
- Planned evaluation includes descriptive analysis, logistic regression, PR-AUC and capture-curve comparisons, with emphasis on interpretability, data quality and regulatory decision support.

Rail Punctuality Data Warehouse & BI Dashboard

MSc project | Oracle SQL & Tableau | 2026

- Designed an Oracle SQL star schema linking train journeys with weather, operators, stations, dates and delay bands for analysis-ready reporting.
- Loaded, cleaned and standardised raw CSV data through staging tables before populating fact and dimension tables.
- Built Tableau outputs to explore delay patterns, operator performance, seasonal effects and route-level punctuality.

Montgomery County Crime & Police Performance Analysis

MSc group project | Python EDA | 2025

- Contributed to Python-based exploratory analysis of public crime and police operations data, turning raw operational records into clearer temporal, geographic and service-performance insights.
- Cleaned missing and inconsistent fields, derived time/location features, and used pandas, NumPy, matplotlib/seaborn, chi-square testing, correlation analysis and Cramer's V.

Portfolio Build - TfL London Transport Analytics Mart

Repo created; first working version in progress

- Planning a public portfolio project using TfL open data to demonstrate Python ingestion, SQL/dbt-style transformations, dimensional modelling, data quality checks, documentation and analytics outputs.

EXPERIENCE

Front-End Software Development Intern

Goodwright Ltd. | London / Remote | Sept 2023 - Dec 2023

- Built interactive biological data visualisation components in a React.js environment for scientist-facing software.
- Developed reusable React.js and Highcharts visualisation components, including PCA visualisations with 2D/3D plots and scree plots to support sequencing data quality review.
- Built an interactive volcano plot for RNA sequencing results, visualising log2 fold change and p-values with adjustable significance thresholds.
- Translated complex biological datasets into clearer, responsive visual interfaces for scientific users.

Web Designer & Developer

Edek Design | London / Remote | Aug 2024 - Aug 2025

- Created Edek Design as a self-initiated design and web project while exploring a move into technology.
- Designed and built the brand, website, visual identity and portfolio concept independently, developing practical skills in front-end technologies, responsive design, UI structure, visual design and project ownership.
- The project helped clarify that I was more drawn to the analytical and technical side of digital work, contributing to my later move into data science.

Store Colleague

Holland & Barrett | Twickenham | Aug 2023 - Aug 2025

- Worked in a fast-paced retail environment, supporting customers while contributing to store operations, stock control, product placement and day-to-day team delivery.
- Developed communication skills, attention to detail and experience working reliably under pressure.

EDUCATION

MSc Data Science

Kingston University | Expected Sept 2026

Focus: SQL, Python, statistics, machine learning, data warehousing, business intelligence and applied data projects.

BA Philosophy - First Class Honours

Newcastle University | 2017 - 2021

Developed analytical reasoning, evidence evaluation, close reading and written communication.

Front-End Web Development Certificate

Trilogy Education Services | Nov 2022 - Mar 2023

Scored 100% on an intensive bootcamp covering HTML, CSS, JavaScript, React, Git, APIs and testing.
